

This sample Rx form shows where to put the seal and two signature lines only. We have listed the items that must appear on a prescription form below. Law or rule has not defined the format or size of a prescription form. Therefore, you may continue to use the same prescription formats or layouts as you have in the past, so long as you position the seal and two signature lines as shown below.

An exception to the two signature lines is permitted for prescriptions that are printed by or transmitted from a Board of Pharmacy approved electronic prescription transmission systems. (RCW 69.41.055)

Required to be on the form, either imprinted or added at the time the prescription is issued:

- Date of issue
- Patient’s name and address
- Practitioner’s name, address, and DEA registration number*
- Drug name
- Drug strength
- Dosage form
- Quantity prescribed
- Directions for use
- Number of refills, if any, authorized
- Manual signature of prescriber

*Note: The DEA discourages the imprinting of the DEA# on the Rx form. A designated place for the prescriber to enter the information is appropriate. If you have one, we encourage you to use your National Practitioner Identification number (NPI#).

- Two part or NCR forms – Seal must appear on original form. It is not required on copy.
- It is okay for vendors to provide legitimate requestors with blank stock of the board-approved tamper resistant paper, with the seal, to print prescription specific information in the office.
- Minimize all overlay of text or obstruction of the seal of approval.

Specifications for the seal of approval

- Washington State outline map is center within a mortar and pestle watermark behind the seal.
 - **20% black for the “watermark” mortar and pestle**
 - State of Washington seal and text - Green ThermoChromic ink must change from Green to Yellow when exposed to heat or friction and back to Green when cooled.
- Sizing:
 - Mortar and Pestle – W x H = 1.125” x 1.125”
 - Washington State with text – W x H = .625”
