Jae Seon Kim
DDS, MSD, FACP, CDT
Shade communication tips for the Ultimate Esthetics
Course Outline

- Camera ➔ Learn how to control exposure
- Gray Card ➔ Utilize PS/LR to calibrate the photos
- Cross Polarization ➔ Reduce the glare to show the true color
Exposure Control

- Shutter Speed
- Aperture
- ISO
- ★ Flash Intensity
EXPOSURE CONTROL

The shutter speed, ISO, and aperture all work together to register the proper amount of light in any given scenario.
Indicates how fast the shutter will close
A hole or an opening through which light travels
Indicates how sensitive the sensor is to light
EXPOSURE CONTROL

- Set Camera in ‘M’ or ‘A’ mode

For M Mode
- ISO
- f-stop
- Shutter Speed
- Flash Intensity

For A Mode
- ISO
- f-stop
- Flash Intensity
Hein S, Zangl M.  
The use of a standardized gray reference card in dental photography to correct the effects of five commonly used diffusers on the color of 40 extracted human teeth.  
Utilizing polarizing filters
Must Have Photos for Effective Shade Communication

With Gray Card + Cross-Polarizing Filter
Clinical Integration
